

Kanishka Raisania

+91 9871217363 | kanishkaraiania@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | [Leetcode](#)

Aspiring Software Engineer with a strong foundation in Data Structures & Algorithms, Machine Learning and Web Development. I am deeply committed to delivering high-impact solutions by writing efficient, scalable code to tackle real-world problems.

Work Experience

SALARYSE <i>Software Development Intern</i>	Feb 2026 – Present <i>Gurgaon, India</i>
- Worked on production-grade backend systems using Java/Spring Boot, contributing to APIs, event-driven workflows, and microservice integrations powering internal platform features. - Utilized AI voice agent platforms to automate outbound calling workflows and built Appsmith dashboards integrated with backend databases, supporting outreach campaigns with ~48% call connection rates. - Developed automated Remotion-based personalized video workflows integrated into the app to improve user experience.	
WAYGOOD ED TECH PVT LTD <i>AI & ML Automation Intern</i>	May 2025 – June 2025 <i>Noida, India</i>
- Independently built an end-to-end AI pipeline to auto-generate videos by scraping 3000+ YouTube transcripts to extract trending topics using REST APIs for script/media creation, cutting content creation time by 80%. - Developed a MERN analytics dashboard with 10+ real-time metrics, cutting manual reporting by 60%. - Scraped and structured data from 50+ university websites to build HelpStudyAbroad.com's backend system.	
NEWGEN SOFTWARE <i>Data Science Intern</i>	May 2024 – July 2024 <i>Gurgaon, India</i>
- Engineered an agent churn prediction model with 94% accuracy using predictive modeling & feature engineering improving retention strategies and decision-making. - Designed 6 interactive Power BI dashboards to visualize key insights from large datasets, reducing report generation time by 40% and improved stakeholder understanding and optimized 10+ datasets via Python scraping.	

Personal Projects

Agent Churn Prediction Model <i>Machine Learning, Predictive Analytics</i> - Link	
- Developed a ML algorithm to predict agent churn using extensive datasets like Agent Master Data, New Business Data, Renewal Data, achieving 94% accuracy. - Implemented data preprocessing and feature engineering to boost predictive accuracy and provide actionable insights for improving agent retention strategies	
Live News App <i>React.js, RESTful APIs, Asynchronous JavaScript</i> - Link	
- Built a real-time news application fetching and filtering content dynamically across 5+ categories, ensuring users received up-to-date information. - Implemented infinite scroll and category-based filtering with asynchronous JavaScript, for seamless content loading.	

Education

Netaji Subhas University of Technology <i>Bachelor of Technology in Computer Science Engineering</i> <i>(Expected-2026)</i>	Nov 2022 – Present <i>Delhi, India</i>
--	--

Technical Skills

Languages & Tools: Java, C++, Python, Spring Boot, REST APIs, PostgreSQL, JavaScript, Git, Linux, MongoDB, React.js, Power BI, Appsmith, Remotion, Docker, AWS
Core Skills: DSA, OOPs, System Design, Microservices, Event-Driven Architecture, Machine Learning, DBMS, OS, Prompt Engineering

Position of Responsibility

Product Owner Gyaan² Educational App (Buildathon 2025)	July 2025 – Dec 2025
- Leading development of a GenAI-powered app simplifying NCERT content in regional languages. - Managing UI/UX flows, modular tasking, and GPT-based multilingual prompt engineering. - Driving end-to-end execution to build an inclusive learning platform for rural students.	

Achievements

- Solve more than **1500+ questions** on *Leetcode, CodingNinjas, GeeksForGeeks*.
- Rated **1870+** on Leetcode (Knight level)
- Semi-finalist** in Flipkart GRiD 2025, Top **0.1%** among 1.6L+ participants nationwide.
- Successfully cleared the **internal** selection round of **Smart India Hackathon 2025** among top-performing teams.
